

# PLASMA FREQUENCIES (Important-read this section first)

This list is a compilation of experimental frequencies reported by actual users to be beneficial when used on animals. They are not intended to replace a vet 's diagnosis or prescription. Always see a licensed practitioner, preferably one with Rife experience. Beware of placebo effects. Also see the CAFL at [www.electroherbalism.com](http://www.electroherbalism.com) for more frequencies. This is an independent list not affiliated with any maker or distributor of energy equipment sold for educational purposes only.

Note: If a frequency is too high for your energy machine, divide by 2 until you get within the unit's range. If it's too low, run double the frequency. This utilizes "harmonics" of the listed frequency.

**Group one** consists of the following----- 727, 787, 800, 880 hz.

**Group two** consists of the following----- 5000, 10000 hz
